Customer No.: 31561 Application No.: 10/709,990 Docket No.: 11416-US-PA

## REMARKS

## Present Status of the Application

This is a full and timely response to the outstanding final Office Action mailed on June 6, 2005. The Office Action has rejected claims 1-3, 6, 8-11 and 13-14 as being unpatentable over US 4009027 to Naidich et al. (USP 4009027) and claims 4-5 as being unpatentable over Naidich in view of JP 06081057.

Upon entry of the amendments in this response, claims 1 and 5 have been amended; claims 4 and 10-14 have been canceled without prejudice, waiver, or disclaimer. Hence, claims 1-3, 5-6 and 8-9 are pending in the present application, with claim 1 being the independent claim.

After carefully considering the remarks set forth in this Office Action and the cited references, Applicants respectfully submitted that the now pending claims are in condition for allowance. Reconsideration and withdrawal of the Examiner's rejection are requested.

## Response to Rejections under 35 U.S.C. 103

Claims 1-3, 6, 8-11 and 13-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over USP 4009027 to Naidich et al.

Claims 4-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Naidich in view of JP 06081057 (abstract). Applicants respectfully transverse the rejection as it applies to claim 1-5, 8, 10, and 13 for at least the reasons set forth below.

Application No.: 10/709,990

Docket No.: 11416-US-PA

The present invention teaches, as recited in independent claim 1, a solder composition,

adapted to bond metallic and non-metallic materials, that comprises chromium (Cr) in an

amount of 5-20 wt.%; stibium (Sb) in an amount of 0.01-50 wt.%; a component selected

from the group consisting of tin (Sn), zinc (Zn), bismuth (Bi), indium (In) and a mixture

thereof; another component selected from the IIIB group in the periodic table or a mixture

thereof in an amount of 0.01~20 wt.%; and an impurity. On the other hand, Naidich teaches

an alloy composition for metallization and brazing in general. There is no explicit teaching

or implicit suggestion that the alloy composition is applicable as a solder for bonding metallic

and non-metallic materials. Moreover, as recognized by the Office, Naidich is completely

silent about the component selected from the IIIB group in the periodic table or a mixture

thereof in an amount of 0.01~20 wt.%.

The Office further relies on the JP patent to teach the group III B element such as Ce.

However, the JP patent teaches the addition of the group III B element to a Cu-Fe alloy, rather

than to an alloy with chromium, stibium and a component selected form Sn, Zn, Bi, In and a

mixture thereof.

Accordingly, Applicants respectfully submit that the motivation to combine Naidich

with the JP patent to render the present invention unpatentable is lacking. Reconsideration

and withdrawal of the rejection are respectfully requested.

## CONCLUSION

For at least the foregoing reasons, it is believed that the pending claims 1-3, 5-6, and 8-9 are in proper condition for allowance. If the Examiner believes that a telephone conference would expedite the examination of the above-identified patent application, the Examiner is invited to call the undersigned.

Date: Angust 18, 2005

Respectfully submitted,

Belinda Lee
